Environment"*

About 4EverGreen Ecoscapes:

4EverGreen Ecoscapes, LLC specializes in environmentally beneficial landscapes such as Rain Gardens, Rain Barrel Installation, and Shoreline Buffers. These economical and low-maintenance landscape features help to keep our lakes and streams free of pollutants, provide habitat, and help save you money.

The founders of 4EverGreen Ecoscapes, LLC have over 20 years combined experience in the fields of conservation and landscaping. This winning combination includes a Bachelors degree in Natural Resource Management, 10 years hands on experience in the conservation field, and 10 years experience in landscape and design.

It is our goal to help individuals and communities promote, preserve, and protect our natural resources. If you are interested in learning more about our services, we would love to visit with you and offer suggestions on how to make your property more environmentally friendly!

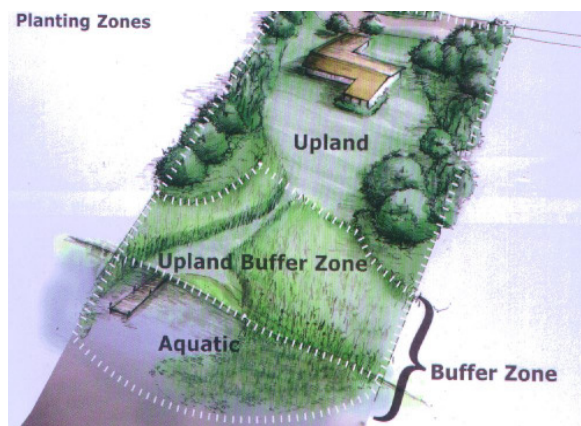

Why do I need a Shoreland Buffer on my property:

Often, shoreline properties are characterized by the traditional landscaping ideas of a manicured lawn down to the water's edge. This "carpet of green" plays a significant role in adversely affecting the water quality in our lakes and rivers. Excess storm water flows directly into the lakes and rivers, causing increased sedimentation, killing aquatic life, and disrupting spawning. The sediment, with accompanying pollutants, may lead to algal blooms, decreased lake depth, and reduced aesthetic appeal.

These are just a few of the potential problems which are expensive to correct, and more importantly, can be avoided by proper water and land use practices.

Benefits of Shoreland Buffers:

- Provide a seasonal array of colors, textures, aromas, and continual wildlife activities.
- Reduces shoreline erosion caused by wind and recreational boat traffic.
- Increases privacy on your property.
- Acts as a filter, which helps slow runoff and prevents lawn fertilizers, pesticides and sediment from reaching our lakes and streams that can cause algal blooms.
- Reduces the amount of lawn and time needed for mowing and lawn maintenance.
- Vegetation along the shoreline creates a barrier to deter Canada Geese.
- May improve your property value.

Why we use native plants.....

- Native plants have an extremely deep root system.
- These deep root systems are effective at stabilizing lake and stream banks and stopping erosion.
- The deep root systems create more voids in the soil which help absorb rain runoff during storm events.
